## Natural Origin of EcoCORK

Trees are never felled to make EcoCORK flooring! EcoCORK is made from the renewable bark of cork oak trees. The largest concentration of cork tree plantations are found in Portugal and Spain. Cork oak trees boast an average lifespan of 200+ years.

In order to protect the trees from possible harm caused by machinery, cork is harvested by hand in the centuries-old traditional method. The removal of bark activates re-growth and increases the tree's lifespan.

## Natural Properties of Cork

- Resilient yet highly durable
- Comfortable and warm to walk on
- Easy to clean and maintain
- Scratch and abrasion-resistant
- Naturally fire retardant and will not release toxic gas on combustion
- Resistant to temperature fluctuation serving as an excellent thermal insulator
- Naturally sound absorbent and reduces impact noise
- Improves indoor air quality; no off-gassing or microfibers

## Easy-to-Install Glueless Floating Floor

This patented "floating floor" installation provides the fastest installation method available and is much easier than other floating floor methods when it comes to installation in tight spaces, such as underneath kitchen cabinets and in doorways. Once installed, you can walk on your floor immediately. Since the floor is not permanently attached to the structure, you can actually disassemble your floor and re-install it in another location.

## Why Choose A Floating Floor?

- No need for messy adhesives
- Ability to remove planks for repair or relocation
- Can be installed over most existing subfloors saving time and money

## Relieve Stress - Give Your Back a Rest

EcoCork flooring provides a comfortable, forgiving cushion of air to walk on helping to alleviate muscular fatigue, back stress, stiff legs, and sore feet.

## Naturally Resists Mold and Mildew

EcoCork flooring naturally resists the growth of harmful mold and mildew that can cause odors and unsightly stains. You can breathe easier with the confidence of having a naturally healthier floor.

## Topical Spill Protection

A moisture-repellent paraffin-oil based agent is factory-applied to the edges and ends of each plank to protect your cork floor from everyday wet spills and keep moisture from penetrating the joints which can damage ordinary floating floor panels. Accidents are bound to happen, but with topical spill protection, moisture is kept on top of the planks and can be simply wiped away with a cloth or paper towel.

## Caring for EcoCORK Floating Floor

Daily sweeping and regular damp mopping with a neutral hardwood floor cleaner is recommended. Spills should be wiped up immediately.

EcoCORK flooring recovers from pressure marks but proper protectors under "feet" of heavy furniture are recommended. Cork, like many natural materials, can fade when constantly exposed to direct sunlight. We recommend the use of window treatments to protect your floor.

Add the distinctive look of EcoCORK to your home and enjoy all it has to offer!

## Warranty

EcoCORK floors are backed by a 15-year Residential Wear Warranty and Lifetime Structure Warranty. For more complete warranty details, visit [www.naturalcork.com](http://www.naturalcork.com)
